Helping Students Process Information

During the course of a typical lesson or unit of study, teachers regularly present students with new information. Sometimes the information is peripheral—even if students do not understand it, they can still grasp the overall goal of the lesson or unit. However, sometimes the information is essential—without it, students will have little chance of comprehending the overall goal.

Five Avenues to Understanding

 Involves the content of the bites and their logical order. For example: the first step Gather new information in small, would involve determining the main idea. digestible bites. Determine the crucial points the teacher intends The second step would be determining whether the major ideas/sections logically to present in lecture or lab. flow into one another. The third step would be determining whether the idea as a whole Bite sends a unified message. Each step logically 1. Chunking Size sets up the next step. Chunks 2.
